

PRECISION QUINCY

Prefabricated Metal Shelters

Over 70 years of experience with thousands of low maintenance, prefabricated metal shelters and industrial enclosures installed around the globe

Communications Shelters

Designed with the communication industry in mind, Precision Quincy Industries shelters are welded steel frame that is both strong and lightweight. Shelters have a real stone aggregate exterior that provides the durability of concrete at substantially less weight. Site construction and transportation costs are greatly reduced using Precision Quincy's lightweight design.

Shelters feature fully insulated and finished interiors that are energy efficient and designed to be maintenance free under years of commercial use. The marine grade polyurethane paint finish is durable and corrosion resistant.

Utility Shelters

Designed for utility applications, Precision Quincy Industries shelters are built strong using welded steel construction. Our shelters provide weather tight protection under the harshest conditions using code compliant designs.

The ultra-light weight design further reduces freight, crane and foundation costs and ships completely prefabricated to your work site. The shelters are fully insulated to reduce energy costs and to protect important internal components. Available in a variety of long lasting maintenance-free finishes.

Railroad Shelters

Precision Quincy Industries shelters are designed and built to last. Shelters are available in aluminum, galvanized or stainless steel with marine grade polyurethane paint or powder coat finishes.

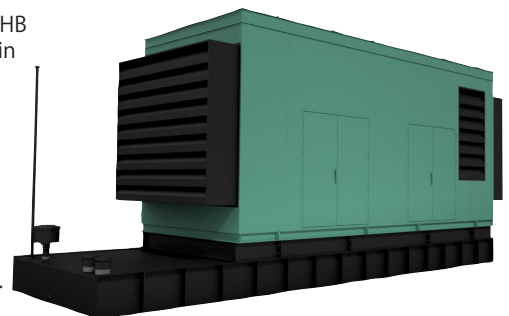

The shelters feature welded construction for long life in industrial applications. Our double-pan door with full contact door gasket provides a dust-proof and water-resistant compression seal that keeps out contaminants. Heavy-duty 3 point lock set with padlockable exterior handle is vandal-resistant and easy to operate. For traditional equipment mounting, RB shelters are available with interior vertical keyslot ribs 24" O.C.

SAE Stand-By Power Enclosures

Precision Quincy Industries specializes in pre-engineered U.L. ® FTTP Classified, sound attenuated enclosure models. Designed to reduce source noise(s) by 30 dB(A) @ 23' (in a free-field environment). Constructed from 5052 aluminum or 14 gauge galvanized roll-formed and welded frame.

Performance proven VHB adhesive bonds the skin to the frame to offer an extremely smooth exterior finish. Each model can be incorporated with a 24 hour or 48 hour run time, UL142 sub base diesel fuel supply tank.

Prefabricated Metal Shelters & Industrial Enclosures

The Precision Quincy Industries Advantage

Precision Quincy Industries (PQI) has over 70 years of experience producing low maintenance, prefabricated metal shelters and industrial enclosures. PQI's products have supported a variety of industries and applications in locations around the world.

Manufactured to strict quality standards using advanced engineering, Precision Quincy Industries shelters are built to last. Units are designed up to a 50-year life expectancy with proper maintenance, compared to a typical shelter life of just 15 years.

Our products are made in the USA with high quality materials following an ISO 9001:2015 standard.

PQI's built-in engineering and manufacturing process ensures a long service life, even in the harshest environmental conditions and after numerous physical relocations.

- Made with heavy gauge walls, roof, and floor joist systems with welded tubular steel framing that maintain their stability, rigidity, and strength over the lifetime of the building
- Built to withstand winds of up to 130 mph or optionally to 150 mph plus with additional enhancements
- Precision Quincy Industries' weld technicians are selected after rigorous certified welding tests and are trained to follow detailed assembling processes
- Built to applicable national and local codes, Precision Quincy Industries products are impermeable to water, and have an appropriate fire resistance rating based on the customer's requirements
- Every shelter base is undercoated with a specialized epoxy to provide maximum corrosion protection

Our engineers and skilled trade professionals consistently work to provide an industry leading product. On the customer experience front, our knowledgeable sales staff facilitates a straightforward purchase process. After order placement, a dedicated project manager will focus on your delivery and provide regular updates on progress and answer any questions.
